The Solutions Architect Associate is a **concept-based AWS certification** teaching:

- The broadcast amount of core AWS services
- Light knowledge on implementing
- Larger focus on the theoretical limits and functionality of services
- Light focus on high-level architecting cloud workloads and choosing the appropriate services to meet the business use case

The course code For the Solutions Architect Associate is **SAA-S03.**

The Solutions Architect Associate **is the most popular cloud certification among all cloud certifications**. It's the most saturated certification so consider accompanying this certification with other certifications like the DVA and SOA to stand out.

Who is this Certification for?

Consider the AWS Solutions Architect Associate if....

You are **want to work as a Cloud Engineer**.

(A Cloud Engineer is the junior level of a Solutions Architect)

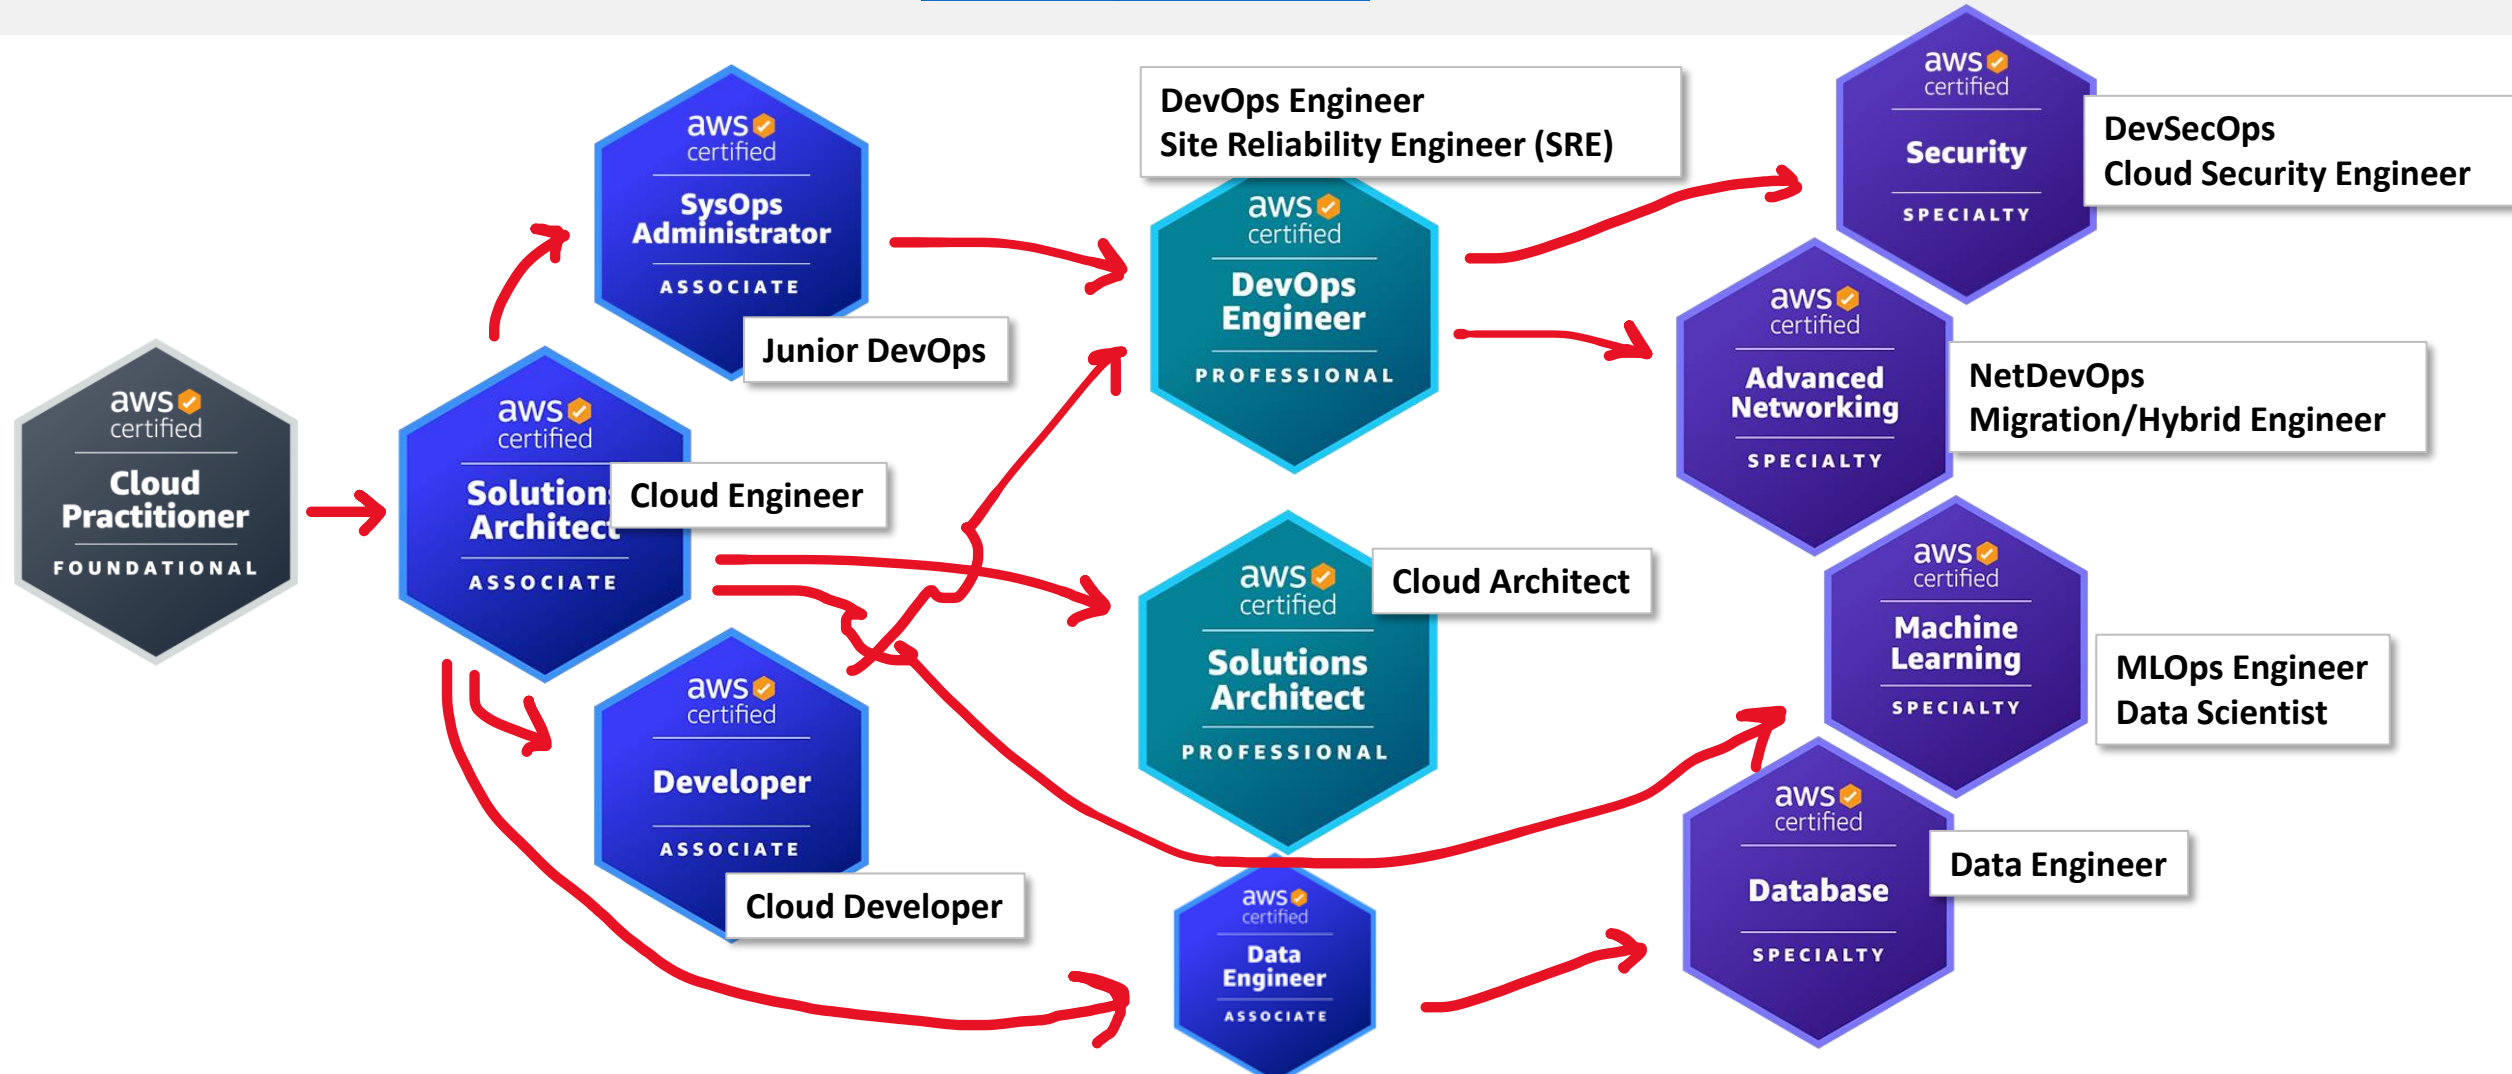

You enjoy the idea of understanding how to architect multiple services together into a cloud workload.

If you don't know what technical cloud role you want to work within but you want to gain the broadest amount of general cloud knowledge.

Real-Talk About Certifications and Goals

Cheat sheets, Practice Exams and Flash cards 🖱️ www.exampro.co/saa-c03

The AWS Solutions Architect **will not make you a Solutions Architect**

Solutions Architect is a senior role that is given to those with years of experience and deep knowledge of implementing technical workloads.

You will not land a Solutions Architect role in 9 months, or even 3 years.

An obtainable role is a Cloud Engineer or Cloud Developer and you need to compliment this certification with deeper implementation knowledge found in other certifications and knowledge:

- Developer Associate (Developer Tools, Deployment, Applications, Programming, APIs)
- SysOps Admin (Cloud Networking, Infrastructure Automation, Servers)
- Personal Projects architecting and then implement complex workloads

AWS itself does not care about AWS Certifications for hiring for their own technical roles. Certifications serve a structured way of learning with a goal post.

Real-Talk About Certifications and Goals

Cheat sheets, Practice Exams and Flash cards 🖱️ www.exampro.co/saa-c03

Cloud Certifications expect you already have a foundation of technical skills in:

- Programming and Scripting, SQL
- IT Networking
- Linux and Windows servers
- Project Management
- Developer Tools
- Application Development Skills
- CompSci Algorithms
- and more...

To fill technical gaps leverage **freeCodeCamp** large catalogue of general technical content.

In our Hands-on instruction, we will do our best to try and fill these gaps.
We might spend considerable time before using a service developing these gap skills.
Labs can be long because want to show you everything, and labs are not heavily edited.

Some Hands-on labs might will end in a failed implementations but are left in to experience troubleshooting or give an accurate reflection of what its like working with the service. Some AWS services we have to learn but are not recommended for use.

We try and do our best to clean up costly infrastructure, but you should always be proactive and check if resources are left running, You are responsible for cost and spend in your AWS account
