# AWS Backup

**AWS Backup** allows you **centrally manage backups** across AWS Services.

Backup services:

- Amazon S3
- VMWare VMs
- DynamoDB
- FSx File Systems
- EC2
- EFS
- EBS
- RDS and Aurora
- AWS BackInt (SAP HANNA)
- SGW
- DocumentDB
- Neptune
- Timestream
- And more....

- **Backup Plan** – A backup policy defines the backup schedule, backup window, backup lifecycle.
- **Backup Vault** – backup are stored in a backup vault
  - AWS Backup Vault Lock allows for Write-Once-Read-Many (WORM) to set a retention period
  - Standard Vault (Default) – backups are always initially stored in the standard vault
  - Air-Gapped Vault — backups can be moved to a logically air-gapped vault for additional security
- Resources can be assigned a backup plan using AWS Resource Tags
- You can backup resources to other AWS Regions or AWS Accounts
- You can manage backups from a centralized account across your entire AWS Organization
- Backups are incremental, so you only store the difference instead of full backups to save costs
- AWS Backup can use an independent KMS encryption key from that of your AWS resources
- Associated charges for AWS Backup appear as “Backup” under Cost Explorer
- AWS Backups are immutable to avoid them being tampered with

**AWS Backup Audit Manager** is built-in reporting and auditing for AWS Backups
