Good luck on your exam!

AWS Auto Scaling

AWS Auto Scaling is a service that can discover scaling resources within your AWS Account, and quickly add scaling plans to your scaling resources.
You can have a central inventory for all your scaling resources.

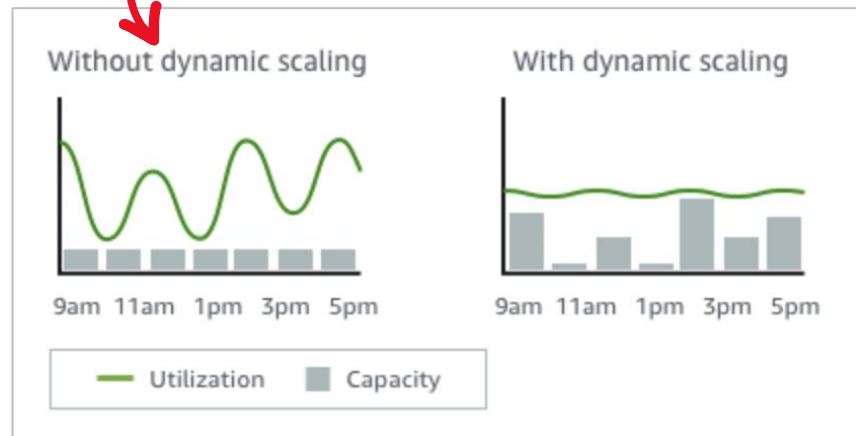

It can manage and make recommendations for the following scaling resources:

- EC2 Auto Scaling Groups
- ECS EC2
- Amazon Aurora
- Amazon DynamoDB
- Spot Fleet

Easily apply:

- Dynamic Scaling (Target Tracking)
- Predictive Scaling

Dynamic scaling, when a metric changes so does the capacity

Predictive Scaling, analyze historical load, generate a forecast and scale based on that forecast
