Good luck on your exam!

AWS Amplify

AWS Amplify is an **opinionated framework** and fully-managed infrastructure to allow developers to focus on building web and mobile applications

AWS Amplify CLI — unified toolchain to create, integrate, and manage the AWS cloud services

AWS Amplify SDK — connects AWS Services to your client-side code.

AWS Amplify UI — A collection of accessible, themeable, performant React components directly connect to cloud

AWS Amplify Hosting — a static website hosting platform

AWS Amplify Studio — visual development environment for building fullstack web and mobile app

AWS Amplify has direct integrations with:

- Amazon Cognito — For auth signin and signup
- API Gateway — For rest APIs
- AppSync — For GraphQL APIs
- S3 — For Storage or for Static Website Hosting
- DynamoDB — For a backend database
- AWS Lambda — custom resolvers

Amplify works with the following js frameworks

- React
- JavaScript
- Flutter
- Swift
- Android
- React Native
- Angular
- Next.js
- Vue

AWS Amplify (Gen2) is currently in preview and may completely change the experience of AWS Amplify
AWS Amplify is a service that has never lived up to delivering on Developer Experience (DX) and **should not be used**.
