Good luck on your exam!

Amazon AppFlow

Amazon AppFlow is a managed integration service that enables secure data transfer between **over 80 cloud services and AWS services**. By specifying a source and destination.

Flow Triggers:

- **Run on demand** — Flow is triggered manually.
- **Run on event** — Triggered by an event from a supported SaaS application.
- **Run on schedule** — Executes automatically on a defined recurring schedule.

Features

- Build **dataflows in minutes** between AWS and SaaS platforms.
- Aggregate data from multiple sources.
- Supports data **encrypted-at-rest and in-transit**.
- Optimize performance using partition and aggregation settings.
- Build **custom connectors** using AppFlow SDK.
- Enable **private flows** via **AWS PrivateLink**.
- Catalog transferred data to S3 using **AWS Glue Data Catalog**

Amazon AppFlow

Amazon AppFlow **supports over 80 third-party and AWS services** for data exchange

- Adobe Analytics
