Good luck on your exam!

AWS Firewall Manager

AWS Firewall Manager allows you to **centrally configure and manage** firewall rules across accounts and applications.

AWS Services that can be managed:

- AWS WAF
- AWS WAF Classic
- AWS Shield Advanced
- **Security Groups**
- Network Access Controls
- AWS Network Firewall
- Amazon Route53 Resolver DNS Firewall
- Third Party Firewall Services

Prerequisites:

- Your account must be a member of AWS Organizations
- Your account must be the AWS Firewall Manager administrator
- You must have **AWS Config** enabled for your accounts and Regions
- You must need Resource Access Manager (RAM) enabled for specific services
 - eg. AWS Network Firewall or Route 53 resolver DNS Firewall

Policy rules

- ☒ Identify and report when the security groups created by this policy become non-compliant
- ☐ Disassociate any other security groups from AWS resources within the policy scope
- ☒ Distribute tags from the primary security group to the security groups created by this policy
- ☐ Distribute security group references from the primary security group to the security groups created by the policy

The Policy configuration greatly vary based on targeted AWS service
