Good luck on your exam!

Amazon Inspector

What is Hardening?

The act of eliminating as many **security** risks as possible. Hardening is common for Virtual Machines where you run a collection of security checks known as a security benchmark

AWS Inspector runs a **security benchmark** against specific EC2 instances. You can run a variety of security benchmarks. Can perform both **Network** and **Host** Assessments

Assessment Setup

You can use the options below to get the following assessments on all of your EC2 instances in this AWS region. Click **Run weekly** for the assessment to run once a week, **Run once** for a one-time assessment, or **Advanced setup** for custom assessments.

☒ **Network Assessments** (Inspector Agent is not required)

- **Assessments performed:** Network configuration analysis to checks for ports reachable from outside the VPC. [Learn more](#)
- **Optional Agent:** If the Inspector Agent is installed on your EC2 instances, the assessment also finds processes reachable on port. [Learn more about optional agent](#)
- **Pricing:** Pricing for **network assessments** is based on the monthly volume of instance-assessments, where an instance-assessment denotes a successful assessment. For example, for 100 instances assessed weekly, the monthly cost would be around \$61/month. [Learn more](#)

☒ **Host Assessments** (Inspector Agent is required)

- **Assessments performed:** Vulnerable software (CVE), host hardening (CIS benchmarks), and security best practices. [Learn more](#)
- **Agent Deployment:** Inspector assessments require an agent to be installed on your EC2 instances. We will automatically install the agent for instances in your default VPC. [Learn more about Inspector Agent](#) and [how to manually install agent](#).
- **Pricing:** Pricing for **host assessments** is based on the monthly volume of agent-assessments, where an agent-assessment denotes a successful assessment. For example, for 100 instances assessed weekly, the monthly cost would be around \$120/month. [Learn more](#)

[Run weekly \(recommended\)](#)

- Install the AWS agent on your EC2 instances.
- Run an assessment for your assessment target.
- Review your findings and remediate security issues.

One very popular benchmark you can run is by CIS which has **699 checks!**
